QUESTION 12 In Cisco UCSM, which two options describe the purpose of a service profile template? (Choose two.)

A. With a service profile template, you can quickly create several service profiles with the same basic parameters, such as the number of vNICs and vHBAs, and with identify information drawn from the same pools.

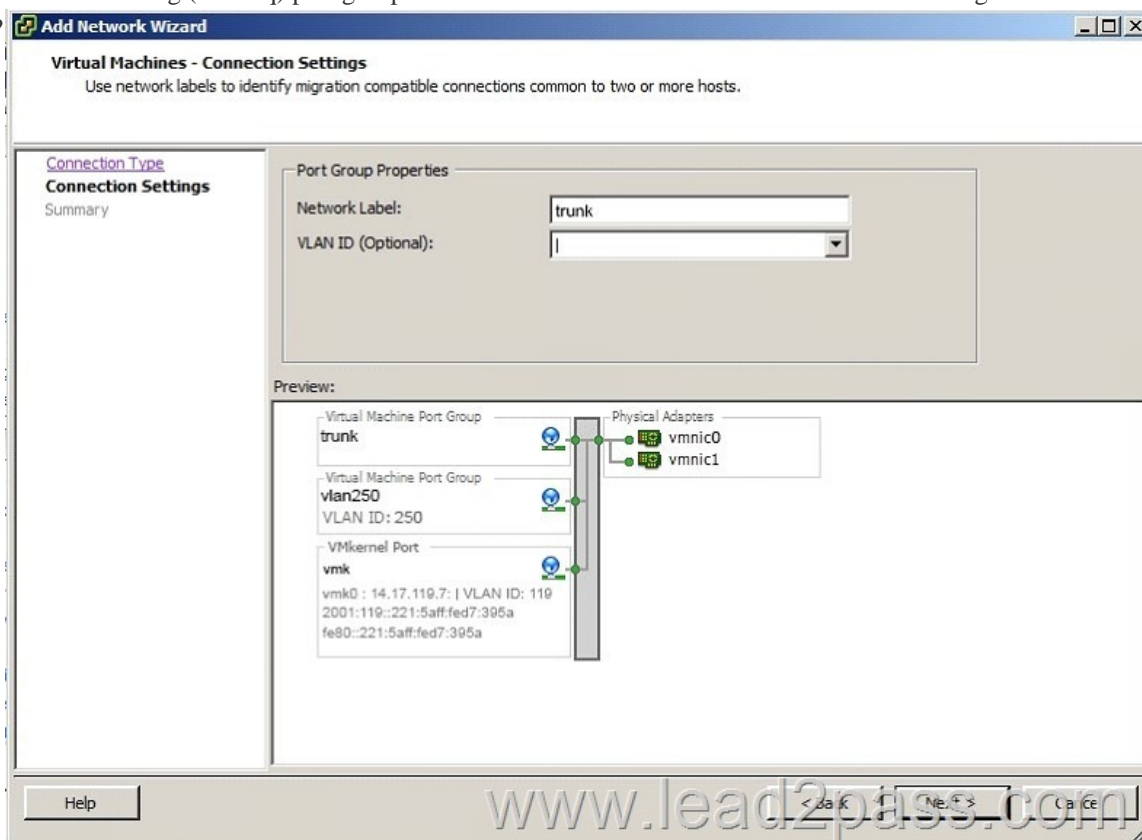

B. A service profile template parameterizes the UUIDs that differentiate one instance of an otherwise identical server from another. Templates can be categorized into two types: initial and updating.

C. When using an initial service profile template, changes to the initial template automatically propagate to the bound service profiles.

D. Service profiles created from an updating service profile template do not inherit all the properties of the template and remain connected to the template. Any changes to the template must be propagated manually to the service profiles that are created from the template.
